### MEET THE NEEDS OF THE CUSTOMER

The configuration options of the software allow it to adapt to various customer needs. The flexibility of data transfer will be suitable for working with various accounting systems

### MODERN TECHNOLOGIES

The system fully uses the advantages of RFID technology. You don't need to see the inventory label directly, the data is read through wood, plastic, glass and other materials. It is possible to use normal barcodes as well.

### OPERATIONALITY

The handheld itself identifies the location of the assets, the employee can make the necessary assignments right where the inventory is located. Data may be stored into a database system after inventory counting or assignment, by need.
